UTTAR PRADESH STATE E-WASTE MANAGEMENT REPORT

FY 2025–26

Executive Summary

The State of Uttar Pradesh has been assessed across seven major indicators of e-waste management covering inventory generation, collection efficiency, recycling performance, regulatory compliance, environmental protection, informal sector integration, and public awareness.

The overall **State E-Waste Management Score** is:

44.5 / 100

Performance Level

CRITICAL

This score indicates that although the state has made progress in regulatory compliance and environmental monitoring, significant improvements are required in e-waste inventory management, formal recycling infrastructure, informal sector integration, and public awareness.

Indicator	Value
Overall State Score	**44.5 /100**
Performance Band	Critical
Categories Evaluated	7
Highest Performing Category	Environmental & Health Safeguards
Lowest Performing Category	Generation & Inventory

State Performance Summary

Category	Weight	Achievement	Score Earned
Generation & Inventory	15	0%	0
Collection Performance	20	75%	15
Formal Recycling & Treatment	20	22.4%	4.5
Regulatory Compliance	15	80%	12
Informal Sector Integration	10	16.7%	1.7
Environmental & Health Safeguards	10	83.3%	8.3
Awareness & Outreach	10	30%	3

Category-wise Assessment

1. Generation & Inventory

Score

0 /15

Observation

The state currently lacks a complete and verified inventory of e-waste generation. Without accurate estimation of waste generation, planning collection systems and recycling infrastructure becomes difficult.

Priority

Very High

2. Collection Performance

Achievement

75%

Analysis

Collection efficiency is relatively good compared to other categories. However, nearly one-fourth of generated e-waste still remains outside the formal collection system.

Suggested Improvements

- Increase authorized collection centres
- Expand door-to-door collection
- Strengthen EPR implementation

3. Formal Recycling & Treatment

Achievement

22.4%

Analysis

Formal recycling remains one of the weakest areas. Most generated e-waste is still likely handled through informal channels instead of authorized recyclers.

Major Challenges

- Low authorized recycling capacity
- Limited dismantling facilities
- Weak material recovery system

4. Regulatory Compliance

Achievement

80%

Analysis

Regulatory compliance represents one of the strongest performing sectors.
Most registered stakeholders comply with applicable environmental regulations.

Further Actions

- Increase inspections
- Strengthen enforcement
- Improve penalty recovery

5. Informal Sector Integration

Achievement

16.7%

Analysis

The informal recycling sector remains largely disconnected from the formal waste management system. Workers require registration, training, and integration into authorized recycling networks.

Improvement Areas

- Worker registration
- Safety training
- Incentive schemes

6. Environmental & Health Safeguards

Achievement

83.3%

Analysis

Environmental monitoring and public health protection demonstrate the highest performance among all categories.

Future Focus

- Expand monitoring coverage
- Continue periodic environmental assessments
- Increase health awareness campaigns

7. Awareness & Outreach

Achievement

30%

Analysis

Public participation remains limited due to insufficient awareness campaigns.

Suggested Activities

- School awareness drives
- College campaigns
- Urban collection events
- Digital awareness programs

Strengths

- ☑ Strong environmental monitoring
- ☑ High regulatory compliance
- ☑ Good collection efficiency

Key Weaknesses

- ✗ No proper inventory system
- ✗ Low recycling capacity
- ✗ Poor informal sector integration
- ✗ Limited awareness campaigns

SWOT Analysis

Strengths	Weaknesses
Strong compliance	Poor inventory
Good monitoring	Low recycling
Effective collection	Weak awareness

Opportunities	Threats
Smart collection systems	Illegal dumping
Digital tracking	Environmental pollution
Public participation	Informal recycling

Gap Analysis

Category	Current	Desired	Gap
Inventory	0%	100%	100%
Collection	75%	100%	25%
Recycling	22.4%	100%	77.6%
Compliance	80%	100%	20%
Informal Integration	16.7%	100%	83.3%
Environmental	83.3%	100%	16.7%
Awareness	30%	100%	70%

Recommendations

Immediate

- Develop a comprehensive state-wide e-waste inventory.
- Expand formal recycling facilities.
- Improve public awareness initiatives.

Medium Term

- Increase authorized collection centres.
- Register and train informal workers.
- Implement digital waste tracking.

Long Term

Strengthen Extended Producer Responsibility (EPR).

Promote circular economy practices.

Introduce AI-based monitoring and forecasting systems.

Performance Rating

Score Range	Rating
85–100	Excellent
65–84	Good
Score Range	**Rating**
45–64	Needs Improvement
0–44	Critical

Uttar Pradesh Result

44.5 /100

Performance Status: CRITICAL

Conclusion

The current assessment indicates that Uttar Pradesh has established a reasonable foundation in environmental safeguards, regulatory compliance, and collection performance. However, the absence of a comprehensive ewaste inventory, limited formal recycling capacity, inadequate integration of the informal sector, and low public awareness significantly reduce the state's overall performance. Strengthening these priority areas through improved infrastructure, digital monitoring systems, enhanced stakeholder participation, and sustained awareness initiatives will be essential to achieve an efficient and environmentally sound e-waste management ecosystem in the coming years.
